

JetPeel
INVISIBLE TREATMENT. VISIBLE RESULTS.

ONE TECHNOLOGY ENDLESS APPLICATIONS

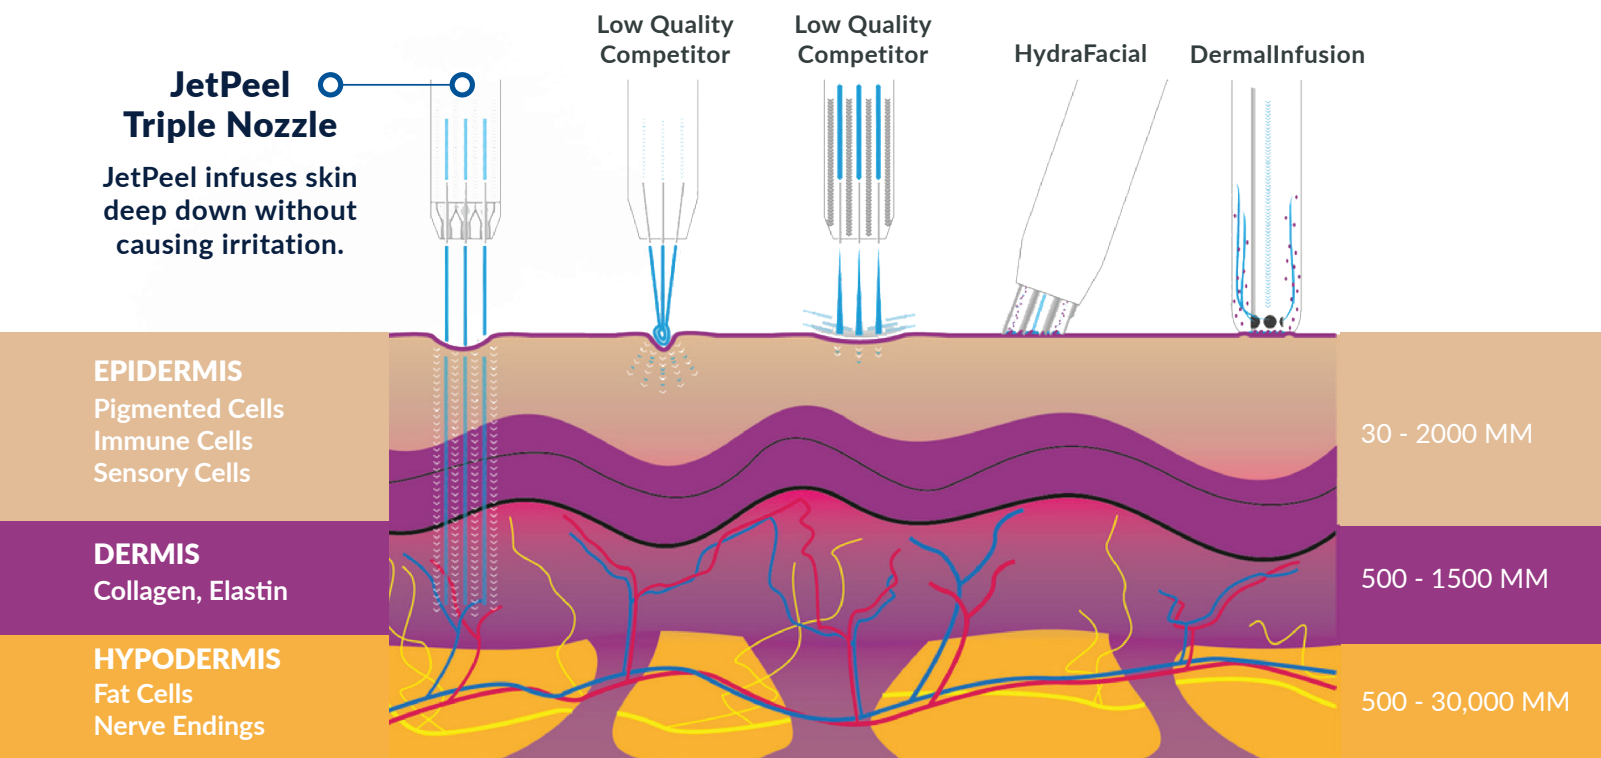

THE JETPEEL INNOVATION

JetPeel is a revolutionary, non-invasive aesthetic treatment system offering a needle-free, pain-free solution for transdermal infusion. It combines lymphatic drainage, exfoliation and infusion to treat a variety of skin conditions on the face, body and scalp.

Powered by jet aviation engineering, JetPeel touch-free patented handpieces use pressurized air, accelerated to supersonic velocities, to open microchannels in the skin to deliver powerful, bioactive skin nutrients deep down into the dermal layer. Proprietary Jet Solution serums containing anti-aging plant stem cells, antioxidants, hyaluronic acid and biomimetic peptides offer a broad range of personalized, results-based treatments.

THE JETPEEL ADVANTAGE

In comparison to competitor handpieces, JetPeel nozzles penetrate significantly deeper into the skin.

Advanced Facial Treatments
Chemical Exfoliation | Microdermabrasion
Mesotherapy | PRP Therapy
Lymphatic Drainage & Tissue Massage
Excessive Sweating | Hair Restoration

THE JETPEEL BUSINESS OPPORTUNITY

ONE VERSATILE TECHNOLOGY

Allows practitioners to administer a wide range of treatments for face, body and scalp.

NO NEEDLES, NO PAIN, NO DOWNTIME

Offers a holistic, natural approach to microneedling, injections, and cosmetic procedures.

EXCEPTIONAL ROI

Results-based treatments, with low consumable cost and premium price point, yield a rapid return on investment.

SAFE AND EFFECTIVE

Class 1 FDA registered device, available in both medical and aesthetic versions, offers customizable treatment programs for all skin types & skin conditions.

ENHANCES RESULTS OF OTHER PROCEDURES

Can be combined pre and post procedure to improve healing and results of ablative and non-ablative lasers, cosmetic surgery and skin tightening treatments.

OUR PARTNERS LOVE JETPEEL

**"JetPeel is needle-less microneedling
- way more than a facial."**

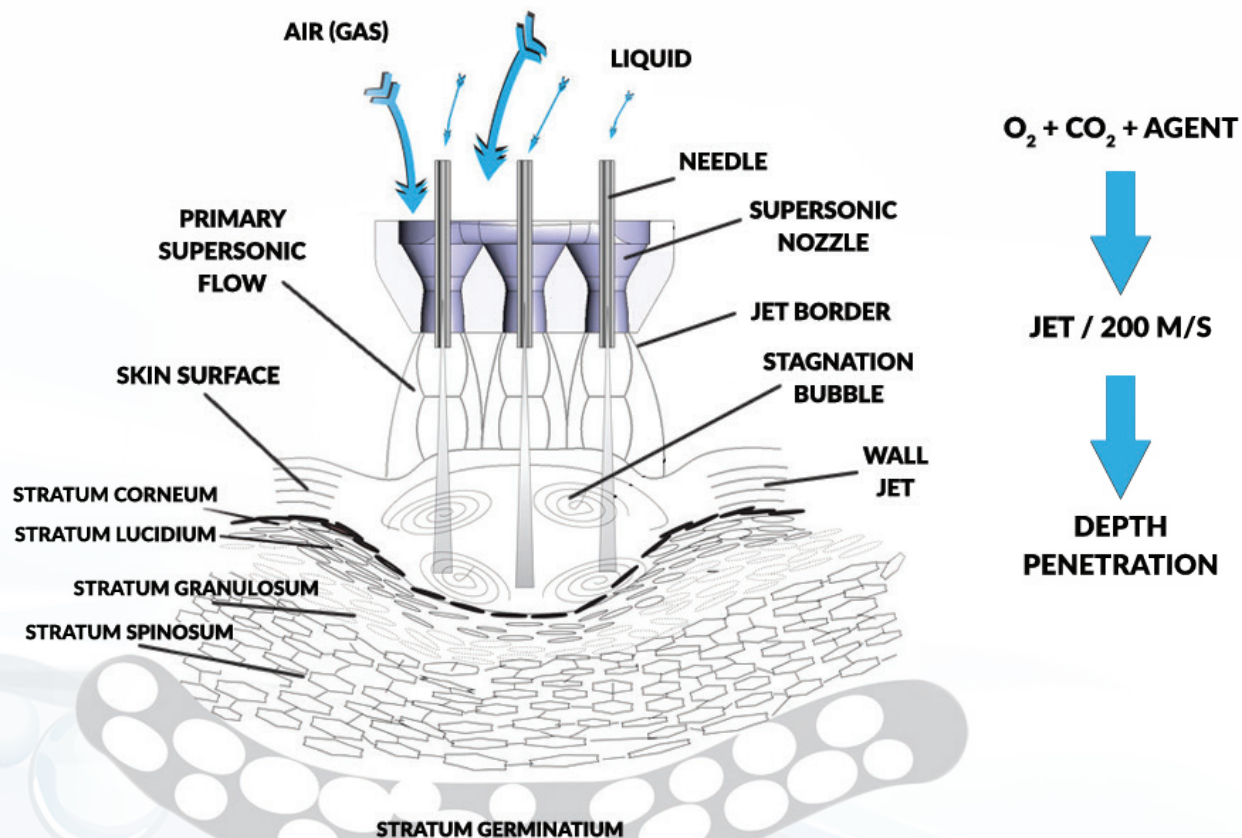

Dr. Dennis Gross, Dermatologist & Founder
Dr. Dennis Gross Skincare

**"Versatile and effective!
People love the results."**

Director, The Spa by Equinox Hotels

THE SCIENCE BEHIND THE TECHNOLOGY

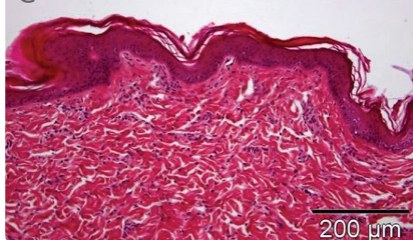

A unique patented technology, based on jet aviation engineering, JetPeel uses pressurized oxygen to accelerate liquid or saline to a velocity reaching 200m/sec, and with a special patented handpiece nozzle, breaks down the accelerated liquid into micro-droplets. The powerful jet-stream of micro-droplets stretches the skin at the point of contact causing barophoresis - creating tiny microchannels in the epidermis to allow for delivery of nutrients down to the dermal layer. This process of dermal infusion, also known as hydroporation, provides a versatile and precise means for performing a wide variety of skin treatments.

THE CLINICAL RESULTS

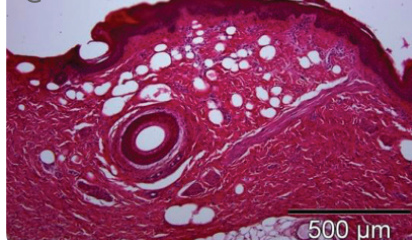

In vitro epidermal and dermal histological characteristics in response to hydroporation using JetPeel dermal infusion.

@200 microns

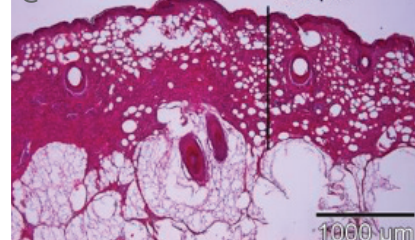

Healthy epidermis before JetPeel infusion.

@500 microns

Hydroporation over 30 sec in a defined area led to vacuole formation, removal of the stratum corneum and circumscribed epidermal loss. Localized separation of dermal fiber bundles are visible.

@1000 microns

Infusion of JetPeel bio-nutrients led to a uniform vacuole formation, spreading of dermal fibers within the full depth of dermis up to 1436 microns of depth was measurable.

THE JET ROUTINE **THREE-STEP PROCESS**

A complete JetPeel treatment takes approximately 45 minutes (depending on protocol) and includes lymphatic drainage, exfoliation, and a customized infusion of natural, bioactive skin nutrients to address specific skin conditions, providing visible results with no downtime or skin irritation.

Lymphatic Drainage

A pressurized massage using specially-formulated detoxifying water containing Aloe, Silver Oxide and Hyaluronic Acid, deep cleans and purifies. This stimulates blood and lymphatic circulation to eliminate toxins.

Exfoliation

Detoxifying water, combined with active exfoliating ingredients such as Glycolic and Mandelic Acid, gently removes natural skin debris and dead skin cells. It oxygenates tissue and stimulates microcirculation, preparing skin to accept nutrients during the infusion step.

Infusion

A pressurized force of customized, bioactive skin nutrients* are infused deep into the dermis via a patented handpiece. All-natural, nutrient-rich formulas include Hyaluronic Acid, Biomimetic Peptides, Vitamin A+E, Vitamin B5, and Vitamin C.

**Skin nutrients are customized to specific skin conditions.*

Booster (Optional Add-On)

An optional infusion step, using a selection of targeted boosters, to address specific skin conditions and enhance treatment results.

WHERE IN THE WORLD

Launched in 2004.
JetPeel devices are currently
distributed in over 23
countries worldwide.

ORIGINS OF JETPEEL

Manufactured in Israel by TavTech, the JetPeel technology originates from the principles of jet aviation and was developed by a Russian rocket scientist. It was initially used in hospitals for wound cleansing and debridement to treat wound and burn victims. Using patented handpieces, and proprietary Jet Solution serums, the device was later adopted for use in aesthetics.

POWER SERUMS

Jet Solution proprietary serums are manufactured in Milan, Italy under strict European regulatory guidelines.

PATENTED HANDPIECES FOR A WIDE RANGE OF APPLICATIONS

JetPeel nozzles penetrate significantly deep into the skin, down to the dermal level. Exclusive JetPeel patented handpieces are precisely adjusted to the unique transport mechanism.

The nozzles are able to withstand enormous pressure, in combination with a speed of up to 200m/s. The perfect interaction between the JetPeel handpieces, and the molecular weight of the Jet Solution serums, ensures optimal results.

TRIPLE

With three specially designed nozzles, this handpiece is one of the secrets behind the efficacy of JetPeel technology. Ideal for performing lymphatic drainage, exfoliation and infusion steps. The perfect tool for most face, body and scalp jet treatments.

MAGIC

A unique single nozzle, designed for infusion of active ingredients to effectively treat precise, targeted areas such as fine lines and wrinkles.

SINGLE

This single large exit nozzle is designed mostly for body treatments and when a high molecular weight product is infused.

VACUUM

A vacuum nozzle, designed for removing comedones and other debris from the epidermis, as well as for under eye drainage massage.

PRESTIGE

A special handpiece designed for comfortable infusion of 4 ml single use vials.

PRESTIGE PLUS

Sterile, single patient use, patented handpiece includes an air shield for safe and effective delivery of liquids in a luer-lock syringe without touching the skin. Indicated for use with PRP therapy by authorized practitioners. A no pain, no downtime alternative to microneedling and injections.
