JET
YOUR
SKIN

One technology, endless
applications for healthy,
beautiful skin.

JET LED-LIGHT

Makes the skin glow.

Depending on the skin condition and treatment goal, choose the appropriate red or blue Jet LED light module as a complement. The effects of red and blue light wavelengths perfectly enhance the existing treatment protocols of JetPeel.

Red LED light stimulates various regenerative processes and promotes skin rejuvenation. It has been shown to stimulate fibroblasts and increase collagen production, improving elasticity and firmness while smoothing fine lines. Additionally, treatment with red LED light enhances blood circulation and supports a healthy radiance.

In a study among 300 patients, 90% reported that their skin texture became softer, and their fine lines were reduced.

Jet LED Light Module (620-630 nm)

- Mature skin in need of regeneration
- Loss of elasticity and wrinkle formation
- Dark spots and post-inflammatory hyperpigmentation

Blue LED light has anti-inflammatory, antibacterial, and soothing attributes. It reduces irritations, redness and impurities like pimples and blackheads. It promotes a fine, healthy and balanced complexion.

Studies demonstrate the reduction of inflammatory lesions in cases of mild to moderate acne.

Jet LED Light Module (460-470 nm)

- Impurities and redness-prone skin
- Visible blood vessels and sensitive skin
- Itchy, sensitive scalp

JETPRO DUO

With the power of light.

With JetPro Duo, JetPeel is setting a new milestone in revolutionary development by combining deep-acting LED light therapy with the outstanding effects of JetPeel hydroporation technology. The JetPro Duo LED light technology uses the aqueous hydroporation jet as a light conductor to photoporise red or blue light waves deep into the skin, down to the stratum reticulare.

For a long time, light therapy has been used in the field of medicine for the effective treatment of dermatological conditions and is now also established in the aesthetic industry. This unique combination guarantees you even better, instantly visible results without additional treatment time and therefore enhances your business success.

JETPRO2GO

Never be without JetPro.

JetPro ToGo is the compact version of the JetPro Duo, so you can pack your clinic and deliver the combined JetPeel and LED-light treatment in any setting. Meet the customers where they want and offer an exclusive VIP JetPeel experience at their location and convenience. JetPro ToGo allows you to expand your business and success beyond the clinic.

Aestheticians can provide the same professional JetPro Duo results in customers' homes, offices, corporate events, bridal parties, birthday parties, spa days, or wherever the clientele requests it. Don't limit our practice to the clinic – take your JetPeel success anywhere.

DEVICE FUNCTION COMPARISON

INCLUDE ALL 3 STEPS
(LYMPH, EXFOLIATION, INFUSION)

REQUIRE NO DOWNTIME, NO PAIN, &
CAN ALLOW NEEDLE-FREE PRP

INCLUDE LED LIGHT THERAPY AND
UPGRADED SILENCING TECHNOLOGY

COMPACT & PORTABLE, CARRY ON
ACCESSIBLE, 50% WEIGHT REDUCTION

JETPEEL

Revolutionary Deep Treatment

JetPeel is the non-invasive revolution for healthy, beautiful skin. The patented JetPeel Hydroporation technology is based on the laser beam and enjoys a unique position in the global aesthetic market.

In multiple clinical studies conducted by leading university clinics, JetPeel has scientifically proven the deep effectiveness of its hydroporation.

Benefits of Hydroporation VS. Needle Injection

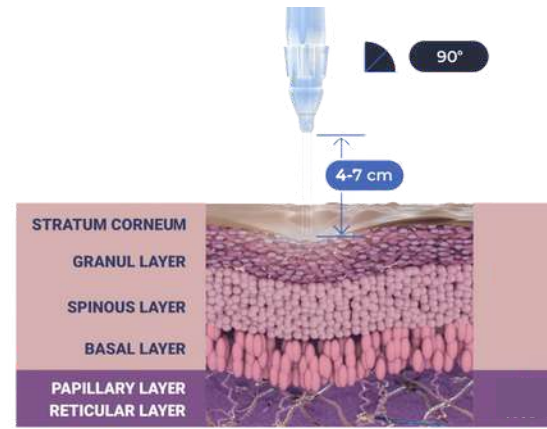

As an alternative to needle injections, hydroporation is needle-free and completely free of risks. It can be performed as a non-invasive treatment in a cosmetic context. It has the following benefits:

With needle injections, liquid active ingredients are injected subcutaneously into the skin. The resulting “bubble” must be massaged away by the doctor, whereby a high proportion of the active ingredients is metabolized by the body.

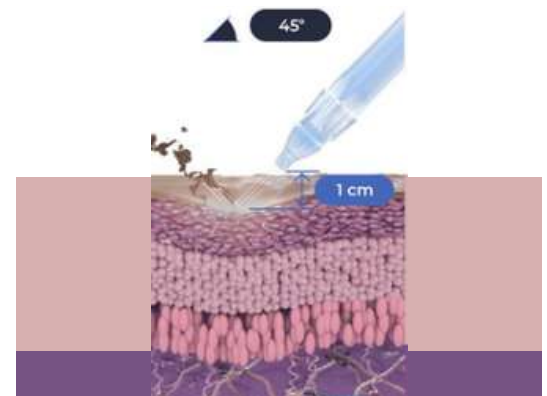

The JetPeel hydroporation jet in contrast penetrates deep into the skin at high speed via the aquaporins. It places the certified special active ingredients evenly between the collagen fibers, where they are embedded, allowing more active ingredients to work in the skin and prevent formation of scar-forming collagen that could happen in injections.

THE STEPS

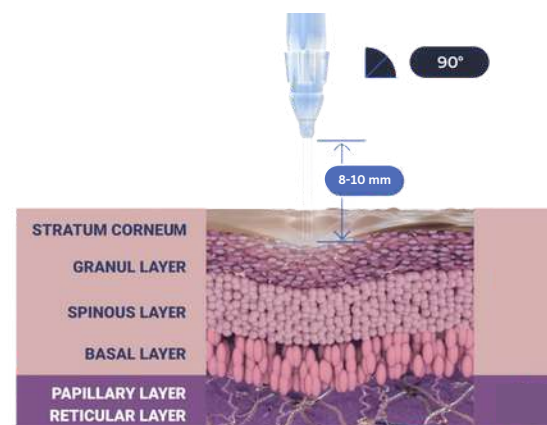

01 LYMPHATIC DRAINAGE

02 EXFOLIATION

03 & 04 INFUSION & BOOSTER

JETCARE

The original effective serums
from JetPeel by TavTech

For the JetPeel Hydroporation technology, specific JetCare serums have been developed. Their viscosity is precisely adapted to the unique transport mechanism of the handpieces. JetCare active ingredients must withstand tremendous pressure and speeds without altering their molecular structure or losing effectiveness.

Only the perfect interaction of patented JetPeel handpieces and JetCare active ingredients ensures deep hydroportion and consistently excellent treatment results.

The results are immediately visible and perceptible and the serums have a long lasting impact. A course of treatments is recommended to achieve the desired long-term success. The treatment should then be repeated at regular intervals and as required.

INDICATIONS

- Mature skin in need of regeneration
- Wrinkles and loss of elasticity
- Impurities such as pimples and blackheads
- pH management
- Pore refinement
- Telangiectasias, couperose
- Dark pigment spots, post-inflammatory hyperpigmentation
- Eye puffiness, eye lifting, lip volume

HANDPIECES

Patented & researched-based
precision

JetPeel Hydroporation technology features specially developed and patented JetPeel handpieces which are precisely tailored to fit the unique transport mechanism. The nozzels must withstand tremendous pressure in combination with speeds of up to 720 km/h.

This high-end handpiece technology enables a wide range of applications for different skin indications. It guarantees effective and reproducible treatment results.
